

One Day Joint Seminar

'Production of sulphurless raw sugar followed by refined sugar to meet the present market demand'

Date: 15th September 2018

Venu: Nirani Sugars Ltd., Mudhol, Bagalkot District, Karnataka

India is still continuing with the antiquated process of producing plantation white sugar by Double Sulphitation process of Clarification with the process having its own limitations, thereby rendering sugar which is not acceptable in the global market. With 60 % of the total sugar production going to the industrial users (the bulk consumers) and also keeping in mind the global market of the product, there is a serious need on adopting raw-refined route for sugar production in India.

The future of the Indian Sugar Industry lies in adopting the raw-refined sugar route keeping in view the sector-wise demand, particularly, the industrial sector and for better sustainability during both surplus & deficient sugar production scenarios. In this backdrop, National Sugar Institute, Kanpur in collaboration with Nirani Sugars Limited, Karnataka is organizing one day joint seminar at Mudhol on 15th September 2018 on the topic 'Production of sulphurless raw sugar followed by refined sugar to meet the present market demand'
