THEME OF THE SEMINAR

Now from the last five years or so there is greater stress on managing discharges from sugar factories to meet the norms for quality and quantity as specified by the CPCB. Sugar factories, in general and in Gangetic plains in particular, have invested significantly to improve working of their Effluent Treatment Plants by adopting latest treatment technology and equipment. This has resulted in quantum improvement in the scenario which has also resulted in lower water requirement for processing.

However, with the changing phase of the sugar industry, particularly, considering diversion of process intermediates, production of raw-refined sugar, changing configuration of co-generation units and vital issues of effluent generation vis a vis ambient temperatures and sugarcane quality, the whole systems needs to be revisited. With this back drop, National Sugar Institute, Kanpur jointly with CPCB (Central Pollution Control Board) is organizing one day seminar at the institute to brainstorm on the important issue.

> Payment details

Registration fee
₹ 1200/- per
delegate
